JUKYEOM

Bamboo Salt, known as Jukyeom, is a rare and highly prized salt that originates from Korea. Crafted through an ancient and meticulous process, sea salt is packed into bamboo stalks and roasted multiple times at extremely high temperatures using pine wood fire. This unique process enhances its mineral content and therapeutic properties, making it a superior choice for health-conscious individuals.

The

MAN WHO INVENTED BAMBOO SALT

Korean bamboo salt was invented by Dr. Kim Il-hoon, a Korean doctor and researcher, in the early 20th century. He developed this special type of salt based on ancient Korean medicinal practices, refining it into a unique method that enhances its mineral content and healing properties.

Dr. Kim Il-hoon: The Creator of Korean Bamboo Salt

Dr. Kim Il-hoon was a dedicated researcher of traditional Korean medicine and natural healing. He sought ways to enhance the health benefits of salt, a crucial ingredient in food and medicine. Inspired by historical Korean Buddhist practices, he experimented with different purification methods, eventually developing bamboo salt.

His process involved packing sea salt into bamboo stalks and sealing them with yellow clay. The bamboo tubes were then roasted in a high-temperature furnace, initially three times, but later up to nine times, to increase the salt's purity and medicinal qualities. Through this repeated roasting, harmful impurities were removed, and beneficial minerals from the bamboo and clay were absorbed into the salt.

Dr. Kim's innovation led to the widespread use of bamboo salt as a natural remedy for various ailments, including digestive issues, inflammation, and detoxification. Today, it is valued in both traditional medicine and modern health industries worldwide.

His legacy continues as Korean bamboo salt remains a respected health supplement, showcasing the power of traditional wisdom combined with scientific refinement.
